PHYSICAL THERAPY SOLUTIONS FOR SHOULDER, ELBOW & WRIST PAIN

Are you experiencing pain and weakness in your arm? Is it difficult to lift and hold things you use in your daily routine? You could be suffering from tendon dysfunction or even arthritis in your joints.

Whether your pain results from an injury or repetitive stress, it's often the result of underlying trauma or inflammation of the tendons, cartilage, or nerves in the arm. Your pain can be so severe that doing normal activities of daily living seems impossible. While the pain may feel serious, it's entirely curable.

Call our clinic today to make an appointment. With guidance from your physical therapist, you can find solutions to your pain and get back to living the life you enjoy!

What Is Causing The Pain?

Limited shoulder movement due to pain, stiffness, or weakness can affect a person's ability to carry out daily activities (eating, dressing, personal hygiene) and work responsibilities. Factors such as heavy lifting, repetitive movements (especially in awkward positions), and vibrations influence the severity of symptoms and disability.

The most common causes of shoulder pain and disability are:

- Rotator cuff disorders
- Joint disorders
- Arthritis and bone spurs
- Referred neck pain
- Bursitis and tendinitis

Overuse injuries often cause elbow pain. Many sports, hobbies, and jobs require repetitive movements leading to overuse. **The leading causes of elbow pain and dysfunction are:**

- Tennis and Golfer's elbow (i.e., tendinitis)
- Ligament sprains
- Arthritis
- Broken and/or dislocated elbow

Wrist pain is most common in groups participating in physically demanding activities like manual laborers and jobs that require computer use or repetitive movements.

The leading causes of wrist pain are:

- Carpal tunnel syndrome
- Arthritis
- Wrist tendonitis
- Repetitive motion syndrome

Shoulder, elbow, and wrist pain are often the result of workplace injury and repetitive stress injuries. While it is sometimes possible to take action to prevent an injury from developing, it is crucial to be able to recognize when an injury develops and to get help.

Find your physical therapist so he/she can identify what may have caused the pain to create and what you can do to resolve it.

Call us today at **(661) 284-1984** or visit **SCVTherapyServices.com** to schedule your next appointment!

WHAT DO MY SYMPTOMS MEAN?

Aching or stiffness around the front or the side of the shoulder is often due to a tendon/rotator cuff injury. In comparison, pain in the back of the shoulder is likely coming from the joint itself. Although some think the top part or shoulder blade is the "shoulder," they refer to muscles and/or the neck and not the shoulder itself.

Clarifying the location of your pain will help your physical therapist figure out the source of your pain and the appropriate plan to resolve it.

The inner and outer aspect of the elbow is commonly thought to be where most people experience tendon or ligament injuries. Typically, the pain will be sharp at the junction of the tendon and bone but may refer that the forearm generally is due to tendon-related injury or inflammation.

A decreased range of motion is often associated with arthritis. Still, weakness or clumsiness when gripping or holding onto things can be signs of deeper problems. It may indicate a more severe condition: the more dysfunction and disability, the more your conditions warrant seeking help sooner than later.

Ignoring your pain or waiting too long to be seen can make the problem worse and eliminate simple solutions.

Physical Therapy For Shoulder, Elbow & Wrist Pain

Physical therapy treatments for shoulder, elbow, and wrist pain include manual therapy, joint mobilization manipulation, exercise instruction, education, and techniques like KT taping and joint splinting. **These have all been proven to help alleviate pain and restore function.**

Physical therapists assess your particular condition to identify the contributing factors and address all of them. Your therapist is skilled at hands-on intervention and exercise selection for the most comprehensive and appropriate intervention to help you resolve your pain and/or restore your function.

Interventions such as education, manual therapy, therapeutic exercise, nerve and tendon glide techniques are widely used for effective results!

Contact Our Clinic Today

Addressing the pain early on is the best way to prevent an issue from becoming more debilitating. Physical therapy is the ideal tool for providing you with an opportunity to understand what may be causing your pain and help you mobilize and strengthen the surrounding muscles to alleviate the pain associated with your injury.

Contact your physical therapist today for support with learning how to manage the pain and learn exercises and techniques that can help you overcome the injury and restore proper strength and functionality to your shoulders, elbows, and wrists.

3 TIPS FOR PLANTING A POTTED HERB GARDEN

Make the Most of Spring Activities!

As the weather begins to warm up, we are all looking for fun activities to get us out of the house while still remaining safe and following CDC guidelines. At Santa Clarita Valley Therapy Services, we are dedicated to helping you find activities that you enjoy that'll get you moving and out in the sunshine!

One spring activity we think you may enjoy is planting a potted herb garden. Follow our tips below or contact our clinic for more info on how you can enjoy the spring while still protecting yourself!

1. Discover what herbs will work best for you.

Do you find yourself frequently cooking with certain herbs? Instead of making another trip to the grocery store, you can grow them right in your backyard! Figure out what herbs you will use the most and notice how convenient it is to have them growing right outside your home.

2. Make sure you have enough room for each herb to grow and thrive.

A common mistake when planting a garden is not allowing enough room for plants to grow. Most herbs require a diameter of 1-4 feet in their pot to allow the roots to grow and spread. A general guideline for common herbs is as follows:

- 1 foot in diameter: chives, cilantro, parsley, dill
- 2 feet in diameter: summer savory, thyme, basil, tarragon
- 3-4 feet in diameter: sage, mint, rosemary, marjoram, oregano

3. Make sure your herb garden is in the right light.

For best results, herbs generally prefer full, bright light, as long as temperatures are not too hot that they burn the plant. If temperatures reach above 90 degrees in the summer, then it is best to plant your herb garden in an area where it can get bright morning light and afternoon shade. Be sure to check lighting and watering requirements for each herb you purchase.

Looking For More Spring Activities?

For more tips, don't hesitate to contact Santa Clarita Valley Therapy Services today! We can help you enjoy a fun and safe spring.
